It can make for anxious moments on the road. You are driving next to a big **rig** holding tightly on the wheel. Well, soon that tractor-trailer may actually be driving itself, a kind of **cruise control on steroids** if you will. We get the story tonight from NBC's Joe Fryer .

The self driving car movement is truly growing. Daimler has unveiled the **freightliner** inspiration in 18 wheeler that can drive itself. "I am completely hands-free." The semi truck still needs a driver who **steers** it to the highway. From there, cameras and sensors help keep the big rig in a single lane a safe distance from other cars. But if there is an emergency, the driver takes over. "At this point for us, we feel it's really important to continue to have drivers in the vehicle. We absolutely want a driver to be able to take control at any time."

In 2013, crashes involving large trucks killed nearly 4,000 people and injured 95,000 others. "Self driving trucks are important because it could **alleviate** one of the huge problems in this industry and that's **driver fatigue**." The world top automakers are developing and testing **autonomous** technology for personal vehicles. Google's even working on a car with no steering wheel. And earlier this year....":I am in the passenger seat. You can see no one is in the driver seat" BMW showed us a car that can valet park itself. And right now, automakers can only test self driving cars in 4 states. California, Nevada, Michigan and Florida plus the District of Colombia. "This is a case where the technology is moving faster than the lawmakers." Well, Daimler Semi is now licensed to drive on public roads in Nevada. The company wants to conduct more tests and **ignite** a conversation about driverless driving. Joe Fryer NBC News Los Angeles.
