There it is. The strongest hurricane this **hemisphere** has even seen and a popular resort is in its **crosshairs**. Tonight, the breaking news, the monster hurricane hitting right now. The category 5 storm, wind gust more than 200 miles per hour, the most powerful storm ever recorded in the western hemisphere. Americans trapped **for a time**, airports closing, and now parts of the US **bracing for a double punch**. This is ABC World News Tonight with David Mur.

Good evening and we begin tonight with this monster hurricane. Already historic in strength, hurricane Patricia, on a collision course with Mexico. And part of the system combined with storms already hitting the US at this hour. The view from space right now and as I said, this is the strongest hurricane ever recorded in the western hemisphere. Its winds right now far more powerful than Katrina and Sandy. Tourists in Mexico being rushed out. This image from Puerto Vallarta. Several airports already shut down. The track as we come on the air, always to the Texas, before its dawn, 100s of 1000s in its path. Americans in Mexico being rushed out.

Breaking news tonight, the strongest hurricane ever, a category 5 monster making landfall with winds close to 200 miles an hour. Urgent warnings and evacuations in Mexico. Entire cities could be wiped off the map. AL ROCKER is here. Nightly news begins right now. From NBC news, world headquarters in New York, this is NBC Nightly News with Lester Holt.

Good evening, right now, millions are bracing for a hurricane, the likes of which we've never seen. It's called Patricia. It is the strongest hurricane ever recorded. Right now, it is making what is fear to be a catastrophic landfall along Mexico's Pacific Coast. The category 5 storm exploded into a monster overnight, leaving residents and tourists in resort cities. From space, the storm is **ominous** enough, but inside, it's packing wind gusts up to 235 miles per hour. Also torrential rains expected to carry into Texas before this is all over. NBC's Joe Fryer made his way to the Mexican coast and has late details.

Like a **steamroller**, hurricane Patricia is barreling toward Mexico's Pacific Coast, catching much of this paradise off guard. Patricia exploded overnight from a tropical storm to a major hurricane, due in part to the El NINO effect. The unusually warm water is acting as jet fuel for the storm.
